## yolov5

### 安装环境(windows)

```
▼ Bash |  
1 pip install -r requirements-cpu-ubuntu20.04_py38.txt -i https://mirrors.aliyun.com/pypi/simple/  
2 pip install rknn_toolkit-1.7.5-cp38-cp38-linux_x86_64.whl
```

# 交叉编译程序

交叉编译yolov5

```
1 ./build-linux.sh -t rv1126 -a armhf -d yolov5
```

# onnx转rknn

```
1 python convert.py ../model/yolov5s_relu.onnx rv1126
2 python convert.py ../model/yolov8n.onnx rv1126
```

# 在线预编译

在线预编译yolov5 (ubuntu adb connect 10.0.0.179 连接设备)

```
1 python export_rknn_precompile_model.py yolov5.rknn yolo5_precompile.rknn rv1126
2 python export_rknn_precompile_model.py yolov8.rknn yolov8_precompile.rknn rv1126
```

```
root@rv1126:~/rknpu/rknn/rknn_api/examples/rknn_yolov5_demo/install/rknn_yolov5_demo#
root@rv1126:~/rknpu/rknn/rknn_api/examples/rknn_yolov5_demo/install/rknn_yolov5_demo# ./run_rv1109_rv1126.sh

W:tensorflow:From /home/liping/.local/lib/python3.8/site-packages/tensorflow/python/framework/func_graph.py:981: py_func (from tensorflow.python.ops.script_ops) is deprecated and will be removed in a future version.
Instructions for updating:
tf.py_func is deprecated in TF V2. Instead, there are two options available in V2.
- tf.py_function takes a python function which manipulates tf eager tensors instead of numpy arrays. It's easy to convert a tf eager tensor to an ndarray (just call tensor.numpy()) but having access to eager tensors means tf.py_function's can use accelerators such as GPUs as well as being differentiable using a gradient tape.
- tf.numpy_function maintains the semantics of the deprecated tf.py_func (it is not differentiable, and manipulates numpy arrays). It drops the stateful argument making all functions stateful.
W:tensorflow:From /home/liping/.local/lib/python3.8/site-packages/tensorflow/python/ops/resource_variable_ops.py:1659: calling BaseResourceVariable.__init__ (from tensorflow.python.ops.resource_variable_ops) with constraint is deprecated and will be removed in a future version.
Instructions for updating:
IF using Keras pass *constraint arguments to layers.
done

Conv_Conv_26_121:weight  0.69     0.83     21.961
W:tensorflow:From /home/liping/.local/lib/python3.8/site-packages/tensorflow/python/framework/func_graph.py:981: py_func (from tensorflow.python.ops.script_ops) is deprecated and
will be removed in a future version.
Instructions for updating:
tf.py_func is deprecated in TF V2. Instead, there are two
options available in V2.
- tf.py_function takes a python function which manipulates tf eager
tensors instead of numpy arrays. It's easy to convert a tf eager tensor to
an ndarray (just call tensor.numpy()) but having access to eager tensors
means "tf.py_function"s can use accelerators such as GPUs as well as
being differentiable using a gradient tape.
- tf.numpy_function maintains the semantics of the deprecated tf.py_func
(it is not differentiable, and manipulates numpy arrays). It drops the
stateful argument making all functions stateful.
W:tensorflow:From /home/liping/.local/lib/python3.8/site-packages/tensorflow/python/ops/resource_variable_ops.py:1659: calling BaseResourceVariable.__init__ (from tensorflow.pyth
on.ops.resource_variable_ops) with constraint is deprecated and will be removed in a future version.
Instructions for updating:
If using keras pass ^_constraint arguments to layers.
done
→ Export rknn model
done

```
